refractive lenses for the projection optics. the system configuration features four aspheric mirrors and achieves an ultra short focus-ing distance that enables projection onto a large 100-inch screen at a projection distance of only 0.65 meter. an ultra short-focus front projector using reflective projection optics **telescope designs for precision astrometry - andorra optics** - telescope designs for precision astrometry jim mccann george lawrence optical sciences center university of arizona tucson. arizona 85721 abstract in this paper a design study is described for telescopes to be used in precision astrometry. specifically, the application is the search for planets outside the solar system. **rid6kdfn +duwpdq a reflective shack-hartmann wavefront ...** - a shwfs occlusion schema using a korsch telescope. the secondary mirror and the arms used to hold it are clearly visible. the decrease of the incoming signal for each lenslet is proportional to its occlusion. deteriorate the image quality [4]. in adaptive optics a shwfs device is used together with a deformable mirror to compensate for these ... **design of freeform optics in tas journée polissage ...** - freeform optics shall not be considered as a « super aspheric » usually, the best way to design a freeform seems not to convert an aspheric to freeform. freeform optics shall be considered as a new possible way to obtain unobscured, high quality reflective optics. indeed with classical optics, the only way to create an unobscured **telescope types and designs** - telescope types and designs there are three basic types of optical telescopes - refractor, newtonian reflector and catadioptric. all of these telescopes are designed to collect light and bring it to a focus point so that it can be magnified by an eyepiece, however each design does it in a different manner. **astronomy and astrophysics library - springer** - in 1987, "astronomical optics" by d. j. schroeder appeared. harland epps kindly drew my attention to this excellent book in 1988 and i reflected then whether scope for a further work on the subject still existed. i finally concluded that it did: schroeder's book covers a much wider field, since **astronomy and 11 ~i astrophysics library library - springer** - the development of telescope optics is a fascinating story. until this century, the optical theory of reflecting telescopes was essentially limited to the cartesian treatment of axial imagery. in 1905, karl schwarzschild initiated a revolution by applying third order (seidel) theory to the field imagery of 2-mirror telescopes. **imaging characteristics of toroidal and ellipsoidal ...** -
