options using a combination of total internal reflection (tir) and refraction on to place light where it is needed.
side emitting scenarios and specific angular targets are also possible. the hybrid scenario can also use both
lenses and reflector combinations to provide uniformity across targeted areas. **housing lens reflector - platt**

reflector lens **lecture 12: reflector antennas - mcmaster university** - the simplest reflector antenna
consists of two components: a reflecting surface and a much smaller feed antenna at the reflector's focal point.
constructions that are more complex involve a secondary reflector (a subreflector) at the focal point, which is
illuminated by a primary feed. these are called dual-reflector antennas. **secondary optics design**

leds introduction secondary optics are those optics which exist outside of the led package, such as reflector
cavities, fresnel lenses, and pillow lenses. **application product data reflector: series 6vfl2xwl ...** -
reflector: the parabolic reflector redirects spill light from the engine, and eliminates high angle glare. a 5/8"
overlap flange is standard. specular clear alzak is standard; other finishes available for design flexibility. lens:
non-conductive frosted lens is molded of polycarbonate and attaches to reflector with unique self-bayonetting
design. **4' reflector with regressed lens trim - elcolighting** - lens trim features reflector with regressed
lens trim. o.d.: 4 7/8". specifications technical details construction: meticulously manufactured trim with
powder coated or anodized finish. diecast trim ring for durability and lasting quality. installation: clips securely
mount trim into housing and keeps ring flush with ceiling. **reflector and lens antennas type - virtual**

will present design and analysis techniques for reflector antennas. ticra is recognized as the world-leader of
commercial reflector antenna ... **telescope types and designs** - telescope types and designs there are three
basic types of optical telescopes - refractor, newtonian reflector and catadioptric. all of these telescopes are
designed to collect light and bring it to a focus point so that it can be magnified by an eyepiece, however each
design does it in a different manner.
